iGet To Know Our Service!

PREVETTING

BMC has highly trained inspectors worldwide to carry out pre-vetting inspections and assist operators in identifying weaknesses or non-compliances for Vetting Inspection. It is crucial to keep your vessels ready for inspection at all times to maximize commercial opportunities.

REAL TIME NAVIGATIONAL AUDIT

Navigational audits are a requirement of TMSA and becoming more and more common in other trades e.g. bulk carriers and other vessels. Risk Management and auditing are used as tools to monitor and/or improve individual skills as well as those of the whole bridge team.

INTERNAL ISM AUDIT

Our Maritime Management Consultants are able to perform an Internal ISM Audit (Ship) onboard vessels on behalf of a company following the International Safety Management Code which details the requirements for company verification, review and evaluation.

INTERNAL ISPS AUDIT

We generate concise and accurate reports identifying non-conformities, observations and notable annotations. Our objective is to help our clients to assess the risks and determine the measures to counter the threats derived from possible vulnerabilities found in the ships or port facilities.

PRE PURCHASING INSPECTIONS

BMC provides a professional pre-purchase ship inspection service for pre-purchase assessment of pre-owned shipping assets.

RIGHT INSPECTIONS

A RightShip Dry inspection supports the Maritime industry's ongoing efforts to enhance the safety, and assists clients to verify that the vessel conforms to international regulations and performs in accordance with industry standards.

PREPARATION OF SHIPBOARD SHIP SPECIFIC MANUAL

BMC is in charge of helping the operator of the vessels under its management process, in the preparation of specific manuals such as: Shipboard Oil Pollution Emergency Plan, Ship Security Plan, Ballast Water Management Plan, and Ship Energy Efficiency Management Plan.

TECHNICAL, OPERATIONAL AND SAFETY EVALUATION OF OIL TERMINALS

BMC help our clients to eliminate non-conformities and provide efficient and effective solutions to have terminals capable of carrying out safe operations.
